What Tags I Have Used and Why?

I have used tags such as <head> and <title> to give my website an overall title. I used the tag <body style=""background color""> to change the color of my website's background to cornsilk. I used the tags <h1>, <BIG>, and <center> to make a large, centered title on the top of my webpage. I frequently used <center> throughout my page to move various sections into the middle of my website. I used the tag to insert a clip art image into my webpage. I also frequently used the tags and to make my headings both bold and with blue font. The <p> tag was used throughout to insert my paragraphs under my headings. To insert a hyperlink, I utilized the <a href> tag. When inserting my table, I used tags such as <table style>, <tr>, and <th>. Finally, I used the <blockquote> tag to insert a quotation from an online article.
